SOHO

Small Office Home Office

In recent years the number of people needing a home office has risen dramatically. Next to the self-employed who need a place to do their administration, more and more firms give their employees the opportunity to work from home, allowing them to avoid long traffic jams, work flexible hours, and better plan their family life. For them, Massive has launched SOHO, a line of lighting solutions created especially for the small business or home office.

Working at home

It is important for home workers that their office reflects the balance between work and social life. Whether it is a separate room or is integrated in the living room, the office should be a bright, comfortable and flexible area while still radiating the atmosphere of a working environment. Also, various studies prove that there is a direct connection between lighting and productivity: the correct light enhances our work output, while inadequate lighting causes eye strain, fatigue and headaches. To give your office the right ambience as well as providing sufficient lighting, SOHO offers a variety of qualitative products in an attractive design.
